

METHOD AND SYSTEM FOR NAVIGATING WITHIN A BODY OF DATA USING
ONE OF A NUMBER OF ALTERNATIVE BROWSE GRAPHS

ABSTRACT

A facility for navigating within a body of data using one of a number of distinct browse graphs is described. Initially, a navigation request is received. Based upon information contained in the received navigation request, the facility selects one of the plurality of browse graphs. In response to user input, the facility browses the body of data using the selected browse graph.
